

WHAT'S NEW IN MICROSOFT DYNAMICS® NAV 2016?

Microsoft Dynamics NAV is an intuitive Enterprise Resource Planning (ERP) software solution. With the introduction of Dynamics NAV 2016, organisations can now benefit from unprecedented technology that's quick to implement and powerful enough to support even the most ambitious company.

This document outlines the key enhancements to its recent update.

KEY ENHANCEMENTS

Microsoft Dynamics CRM Integration

Enhancements: The integration between Microsoft Dynamics NAV and Dynamics CRM has been enhanced with a new direct connection, allowing for a more streamlined experience in the lead-to-cash process: Microsoft Dynamics CRM for customer resource management and Microsoft Dynamics NAV for financial information and order processing.

Microsoft Power BI Integration

Enhancements: Increase your ability to gain important business insights using the entirely new integration with Microsoft Power BI. With a simple connection to Microsoft's powerful, interactive business intelligence tool, small and midsize businesses gain access to an app that provides owners, managers and executives with automatically refreshed metrics about their customers, sales and financials.

Microsoft Azure SQL Integration

Enhancements: Now Microsoft Dynamics NAV 2016 be configured to use Azure SQL as a relational database-as-a-service. This new integration allows your organisation to scale and flex on demand, while eliminating server maintenance and reducing IT ownership costs.

Microsoft Azure SQL database offers predictable performance at an attractive price.

With industry leading 99.99% availability, security, redundancy, point-in-time recovery and resilience, Microsoft Azure SQL gives your business the flexibility needed to scale safely and affordably.

Microsoft Office 365 Integration

Enhancements: Microsoft Dynamics NAV 2016 has become more tightly integrated with Microsoft Office 365, including simpler Office document creation with merged data from Dynamics NAV. This allows for more effective work between programs in a seamless and more functional workplace, increasing efficiency and taking the burden off the end user.

Document Management Enhancements:

Managing incoming documents has become a lot easier with Microsoft Dynamics NAV 2016. Using document capture or an OCR (optical character recognition) service, you can now capture, store and find incoming documents. For example, PDFs can be transcribed to electronic invoices automatically and electronic invoices can be converted to purchase orders.

E-business Enhancements: Several enhancements for integration with services come with Microsoft Dynamics NAV 2016. For example, you can now send and receive Pan-European Public Procurement Online (PEPPL) invoices across a document exchange service and get currency exchange rates automatically from an exchange rate service.

Extension Enhancements: Microsoft Dynamics NAV 2016 is now a more customisable application, but without needing to modify the underlying C/AL code and metadata. Extension packages offer you a more flexible approach to modifying your business application, and a simpler process for upgrading the application at a later date.

Test Automation Suite: Rigorous testing of changes to Microsoft Dynamics NAV has historically been a time-consuming, manual process that can be prone to human error. With Test Automation for Microsoft Dynamics NAV 2016, you benefit from a better configured solution, sooner and at less cost. A new suite of automated tests accelerates the testing of changes to the development environment, C/AL language environment and the runtime platform.

Universal App on all Devices: Microsoft Dynamics NAV 2016 can be experienced on the broadest range of devices, using a single

app from Microsoft for your smartphone, laptop, tablet and desktop computer. Microsoft Dynamics NAV 2016 Universal App delivers a role-tailored experience in a fast and fluid interface. Designing or customising your pages across devices has never been easier, with an interface optimised for touch, keyboard and mouse.

Workflow Enhancements: With Microsoft Dynamics NAV 2016, your team will be able to collaborate more effectively and efficiently with enhanced workflow environment possibilities. These new and improved features enrich the user experience and save significant amounts of man hours, allowing every worker to focus on their core competencies:

- Automatic posting preceded or followed by user utilisation.
- Enhanced connectivity features allow users to develop varied business-process tasks.
- Approvals from groups or managers.
- Executable process automation to model industry-standard and best practices.

WHY TISSKI TO KICK-START YOUR ERP PROJECT?

Working with Tisski, your organisation can confidently navigate the wealth of innovation Microsoft is delivering and align your business goals with the right Microsoft technology.

No matter how powerful and intelligent technology becomes, Tisski recognises that supporting your people to do their job well must always come first. That's why Tisski employs consultants with strong financial and operational backgrounds, who understand how to leverage technology by using a strong dose of common sense.

By taking a pragmatic approach, Tisski can ensure that your teams feel comfortable using Microsoft technology, in supportive ways that genuinely improve their productivity and effectiveness.
